

# Appendix 5.1B

## School Picnic – Part 2

Solve the following problems, taking into account the reasoning and calculations you made in Part I (Appendix 5.1A).

1. Cantaloupes were provided for the snack. We cut them into 4 equal pieces. Each of the 50 students received 1 piece. How many cantaloupes did we have?

2. At the end of the picnic, there were  $12\frac{2}{3}$  sandwiches left. How many one-thirds of a sandwich were left?

3. A few pies were provided for dessert. We've cut each one in 8 equal pieces. We had just over  $\frac{60}{8}$  pie. How many pies did we have?
